TECHNOLOGY INSPIRED mask

Diving Mask Professional

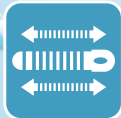

Liquidskin mask:

The most important innovation since the introduction of silicone masks, utilizing exclusive patented bi-silicone technology (softer on skin and firmer for the structure) for optimized fit, adaptation and comfort, 45% softer on the skin, 270% more supple and flexible granting easiest equalization and eliminating marks on your face

Bi-lens mask

With this structure, the mask has low volume, can provide good performance and long durability. It's the ideal choice for the divers who want to fix a eyesight-adjustable lenses.

Ergo buckle

Utilization of the innovative design, it's very easy to adjust the buckle, and the structure is compact and firm.

Tricomfort technology

Utilization of tricomfort technology, we can add a layer of soft material outside the mask position which adheres to the forehead and nose. Make you feel comfortable during the long time's diving.

Low volume mask

The low volume mask always have compact structure and the lenses are very near the eyes, so you can get a wide vision.

MONOLENS mask

This is the ideal choice of the divers who chase for wide vision, and it's also the good choice for whole observation.

Optics lenses

We can prepare eyesight-adjustable lenses for most of the masks. Besides the short - sight lenses (-1~ -7), we can also make presbyopic lenses (+1.5~3).

Buckle fixed on the face skirt

With the buckle fixed on the face skirt, the mask has good liquid dynamics performance. And it can lighten the pressure on the face from the frame.

Triview mask

The product owns its success to magic computer design based on research of the face condition. It congregates the perfect comfort and wide vision in one mask.

mid-size mask

We are trying to develop mid-size mask series, which is suitable for small-face or young divers. Because this mask can fit their faces better.

Technology logo about fin

OPB Fin

This fin can position the blade at a perfect angle. And it offers more propulsion than traditional fins with the same energy. It can offers more power and reduce the tiredness.

Elastic OPB fin

The material used and the vestige-less injection makes the fin with more efficiency performance.

More propulsion

The whale's tail design can provide more propulsion from the water with less energy.

Super design of the blade

We take advantage of the propulsion technology, the blade is designed to a big and flexible central headrace, which let the water flows along the channel inside but not the surface of the blade, so the divers can gain more propulsion with moderate energy.

ABS PLUS strap buckles

The unique design(patented), it's very easy to unbuckle even wearing a thick rubber gloves. And it can prevent the accidental unbuckling during diving.

Open heel design

This design can provide the most propulsion, and distribute the pressure to the foot bottom equally, which will decrease the divers' tiredness.

With the power of whale

Our fins has good consistence in materials, and can provide incessant propulsion when you contitue to beat water.

Maris spotsrs goods

The patented maris sports goods technology provide more power with less energy.

3 materials moulded

Thanks to the usage of 3 differentiated matetials, the fins are more flexible and flex more evenly for good performance. It also lasts for a long duration.

The vertical fixing accessory

The vertical fixing accessory through the body of fin can maintain the fin more stable during beating water, and avoid swing left and right side. So it can save energy and provide more stability.

Professional Diving Fins
